

OH YU CHUAN

AI Engineer | LLM Systems & Applied Python

Berlin, Germany | Authorized to work in Germany | No sponsorship required | Open to Europe-remote roles | CET
+49 176 77628402 | ohyuchuan@gmail.com | linkedin.com/in/yu-chuan-oh | github.com/yc82628

SUMMARY

Computer Science student and AI engineer focused on making LLM systems dependable in practice: sandboxed evaluation, structured model verdicts, and graceful degradation when a provider fails. Built an AI supply-chain malware detector that judges behavioural evidence with an LLM (Top 10, AI Builder Hackathon) and an autonomous coding agent that plans, writes, tests, and repairs its own code. Graduating October 2026, seeking a junior AI/ML role in Berlin.

TECHNICAL SKILLS

AI & LLM Engineering: LLM API integration (Anthropic, OpenAI, Featherless, Cerebras, Groq), Ollama for local inference, prompt engineering, structured model output, LLM-as-judge evaluation, multi-provider fallback and routing, agent architecture

Languages: Python, SQL, C/C++, Bash, HTML

ML & Data: pandas, NumPy, scikit-learn, Matplotlib, Seaborn, feature engineering, data cleaning pipelines, relational schema design (3NF), multi-table SQL queries and aggregations

Backend & Tooling: FastAPI, REST APIs, Git/GitHub, VS Code, Jupyter, sandboxed execution (Daytona), strace

Engineering Practice: OOP, algorithms, error handling, structured logging, testing, documentation; Linux, macOS, Windows

PROJECTS

DayTonor — AI Supply-Chain Malware Detector

Top 10, AI Builder Hackathon (Daytona) | June 2026 | github.com/yc82628/Daytonator

Stack: Python, FastAPI, Featherless, Anthropic, Daytona

- Built a security tool that detects malicious packages exploiting "slopsquatting", where attackers register package names that AI coding agents hallucinate.
- Used an LLM as the judgement layer: the model consumes structured cross-fork behavioural evidence and returns a scored safe / suspicious / malicious verdict with a plain-English rationale.
- Designed the evidence pipeline feeding the model: fork one sandbox snapshot into environments seeded with decoy credentials (AWS keys, SSH key, production config), then diff behaviour so the model reasons over provable signal rather than raw trace noise.
- Implemented graceful degradation across three verdict backends (Featherless, then Anthropic, then a deterministic heuristic), so the system always returns a classification even with no API keys present.

Autonomous Coding Agent

42 Berlin x Needle Hackathon | May 2026

Stack: Python, LLM APIs (Cerebras, Groq), Ollama

- Built an agent that reads a technical specification, plans an implementation, writes code, runs tests, and repairs its own failures across iterative cycles.
- Architected a three-tier inference chain (Cerebras, then Groq, then local Ollama) mixing hosted and local models so the agent kept running through rate limits and provider failures.
- Instrumented every prompt, decision, and error into separate logs, giving a basis for diagnosing where the agent's reasoning broke down rather than guessing.
- Passed 61.3% of public test cases in a 48-hour build, working remotely with one teammate; published full documentation and code on GitHub.

Stock Price Prediction Simulation

Academic Project, BSBI | 2024

Stack: Python, scikit-learn, pandas

- Developed forecasting models (Linear Regression, Moving Averages), improving RMSE by 12% through feature engineering.
- Built an end-to-end data pipeline covering missing-value handling, feature normalisation, and time-series variable creation.

Healthcare Relational Database & Python Interface

Academic Project, BSBI | 2024

Stack: SQL, Python

- Designed and implemented a normalised 3NF schema, eliminating duplicated patient and treatment records.
- Authored multi-table SQL queries (INNER JOINs, aggregations) to power core application logic.

WORK EXPERIENCE

Working Student

Mmaah Korean Restaurant, Berlin | Mar 2025 - Nov 2025

- Introduced a delivery checklist system that cut order discrepancies by 15%.
- Maintained inventory records across 50+ product categories in a high-volume service environment.

EDUCATION & LANGUAGES

BSc (Hons) Computer Science

BSBI Berlin School of Business and Innovation | Oct 2023 - Oct 2026

Coursework: Data Structures & Algorithms, Software Development, Database Systems, Object-Oriented Programming

Languages: English (C1) | Mandarin (B1) | German (A2)
